

**Listing of the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claim 1 (previously presented): A MEMS array comprising:

a substrate having formed thereon a plurality of movable mirrors; and  
an integral covering lens for covering the movable mirrors and adjusting an optical field of at least one of the plurality of mirrors.

Claim 2 (previously presented): The MEMS array of claim 1, wherein the covering lens has a positive focal length.

Claim 3 (previously presented): The MEMS array of claim 1, wherein the covering lens comprises:

a first surface facing toward the plurality of mirrors; and  
a second surface facing away from the plurality of mirrors, wherein the first surface is substantially flat and the second surface is substantially convex.

Claim 4 (withdrawn): The MEMS array of claim 1, wherein the covering lens comprises:

a first surface facing toward the plurality of mirrors; and  
a second surface facing away from the plurality of mirrors, wherein the first surface is substantially convex and the second surface is substantially flat.

Claim 5 (withdrawn): The MEMS array of claim 1, wherein the covering lens comprises:

a first surface facing toward the plurality of mirrors; and

a second surface facing away from the plurality of mirrors, wherein the first surface is substantially concave and the second surface is substantially convex with a smaller radius than the concave surface.

Claim 6 (withdrawn): The MEMS array of claim 1, wherein the plurality of mirrors are micro-machined mirrors.

Claim 7 (previously presented) An optical switching system comprising:  
a first MEMS array having a first plurality of movable mirrors; and  
a second MEMS array having a second plurality of movable mirrors,  
wherein the first MEMS array is operably coupled to reflect an optical signal toward a selected mirror of the second MEMS array, and wherein at least one of the first MEMS array and the second MEMS array includes an integral covering lens for covering the movable mirrors and adjusting an optical field of at least one of the plurality of mirrors.

Claim 8 (previously presented) The optical switching system of claim 7, wherein the integral covering lens has a positive focal length.

Claim 9 (previously presented): The optical switching system of claim 7, wherein the integral covering lens comprises:

a first surface facing toward the plurality of mirrors; and  
a second surface facing away from the plurality of mirrors, wherein the first surface is substantially flat and the second surface is substantially convex.

Claim 10 (withdrawn): The optical switching system of claim 7, wherein the integral covering lens comprises:

a first surface facing toward the plurality of mirrors; and

a second surface facing away from the plurality of mirrors, wherein the first surface is substantially convex and the second surface is substantially flat.

Claim 11 (withdrawn): The optical switching system of claim 7, wherein the integral covering lens comprises:

a first surface facing toward the plurality of mirrors; and

a second surface facing away from the plurality of mirrors, wherein the first surface is substantially concave and the second surface is substantially convex with a smaller radius than the concave surface.

Claim 12 (withdrawn): The optical switching system of claim 7, further comprising:

a plurality of input lenses operably coupled to direct a plurality of optical signals from a plurality of input fibers to the first MEMS array.

Claim 13 (withdrawn): The optical switching system of claim 7, further comprising:

a plurality of output lenses operably coupled to receive a plurality of optical signals from the second MEMS array and direct the plurality of optical signals to a plurality of output fibers.

Claim 14 (withdrawn): The optical switching system of claim 7, further comprising:

control logic operably coupled to determine a desired position for each movable mirror and to send control signals to the first MEMS array and the second MEMS array for setting each movable mirror to its desired position.

Claim 15 (withdrawn): The optical switching system of claim 7, wherein the movable mirrors are micro-machined mirrors.

Claim 16 (canceled).
